SYSTEMS AND SERVICES.
NEWS BULLETIN WEEK 16

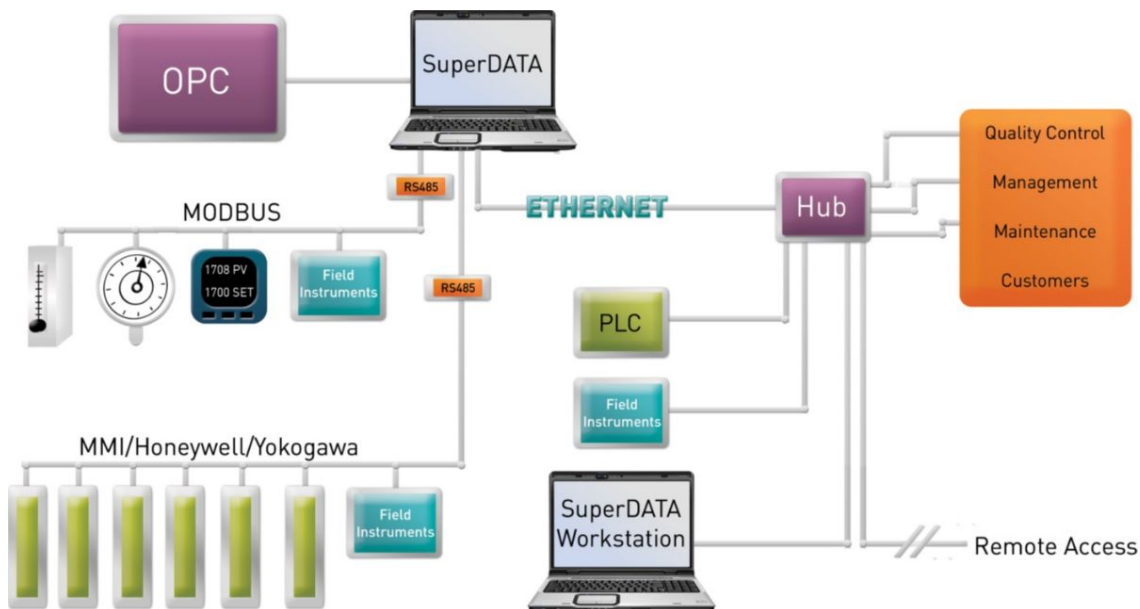

THIS WEEK:

Does Your SCADA system allow Remote Access?

Remote Working

The current crisis has made us all focus on remote working. In-plant work is being kept to a minimum, only for those who need to be there for physical operations. Management and planners can carry on a proportion of their work from home if the heat treatment SCADA system permits remote log in.

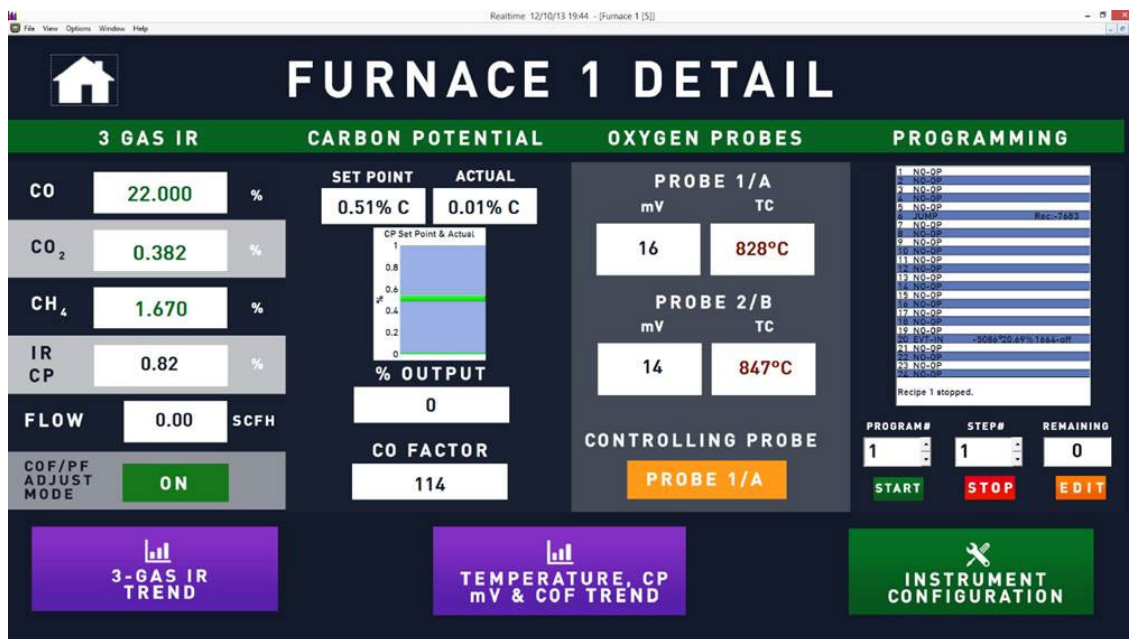

[SSi's SuperData Pro Suite](#) runs securely on a company server, and remote log in can be managed by a third party software like TeamViewer, eliminating any potential security issues from a cloud-based system.

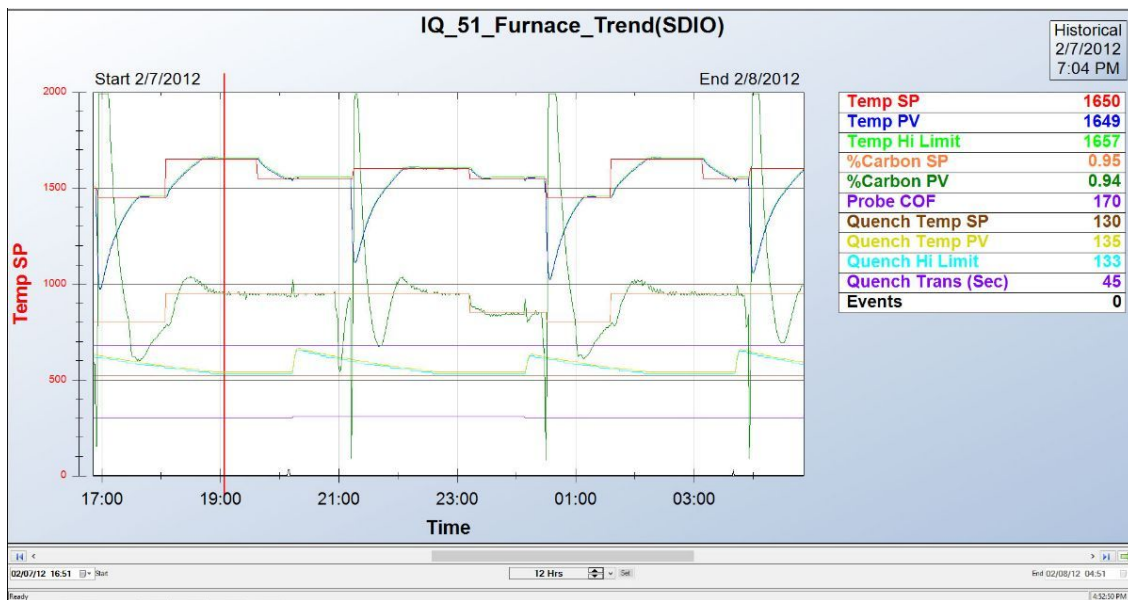

Typical Heat Treatment SCADA Network

SuperData Pro Suite means that real time data can be accessed, current loads can be viewed, furnace usage including loading delay can be analysed, maintenance issues can be analysed and data can be easily exported.

Mobile devices can also log in to the system via an app.

Typical Views of Remotely Accessed Data from SuperData Pro Suite

[Contact us](#) for an initial discussion about your requirement.

We can make it quick and easy to get the system you need
within a reasonable budget and time frame.

Thank you for reading this bulletin. Please contact us with any questions.
